WE TURN MECHATRONICS  
INTO SUCCESS

MEMBER OF **SWISS**FACTORY.GROUP®

# Your Project

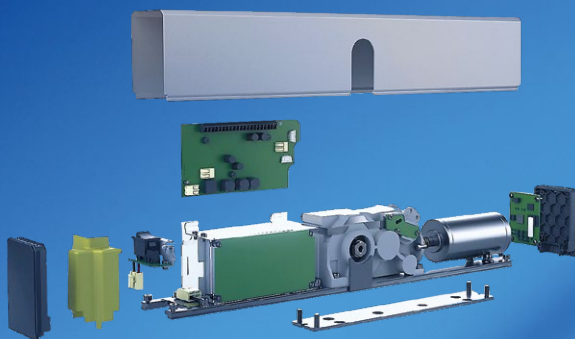

## FOR THE BEST IN THE INDUSTRY

**Excellence in sustainable mechatronic systems – from one source.** At Antrimon, everything revolves around innovative mechatronic systems. We are passionate about developing sustainable services and products that offer our customers real added value. Our expertise in mechatronics and the close collaboration between our teams create synergies that motivate us to deliver top performance and create space for the development of mechatronic innovations. We rely on future-oriented technologies and always cater to the personal requirements of our customers.

**The three Business Units enable unique synergies,** whose competences can be applied modularly to your needs.

- Your partner for mechatronic solutions since 2003
- Just one contact for all products and services in various industries
- Customer specific and tailor-made solutions
- Three Business Units enable unique synergies
- Short communication channels and maximum flexibility

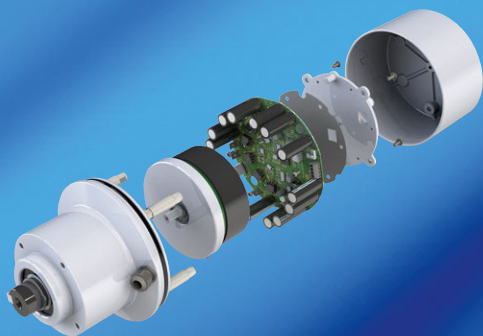

## HOLISTIC PRODUCT DEVELOPMENT

For the **Business Unit Engineering**, innovation means not just the development of new, creative ideas, but also the realisation of usable, useful and sustainable mechatronic products that successfully penetrate the market. Our interdisciplinary and networked team enables the development of a wide range of solutions. Experienced specialists guide your project from the idea phase through development to industrialisation, certification and successful market launch.

- Established product development process (PEP)
- Project and innovation management
- Mechanical design and simulation
- Electronic hardware design
- Software engineering and testing
- Prototype construction
- Tests during development and durability tests

### From the idea to optimal integration of solutions

We rely on close cooperation between development, design, quality assurance and production. Reliable support according to your specifications, comprehensive technical support and a high level of process reliability are our focus. This results in efficient and effective industrialisation of high quality and a short «time-to-market».

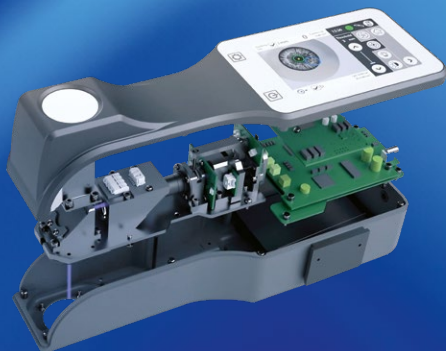

## YOUR SATISFACTION IS WHAT DRIVES US

The **Business Unit Drive Technologies** concentrates on all services in the field of electric drive technology for apparatus and mechanical engineering. Thanks to many years of experience in the drive market, you receive the best support for every phase of your project. Our extensive partner network enables technology-independent solutions, which are complemented by our in-house motion control platform. Your needs and the associated expert advice are the top priority at all times.

- Broad product range
- Long-standing partner network
- Technology-independent and flexible solutions
- Customised drive technology
- Motion control development
- Implemented drive technology

### **From standard drives to complex drive systems**

With an in-depth understanding of drive technology and highly qualified experts, we accompany you from the evaluation to series production. Our work can already start with the development and design of mechatronic systems to guarantee drive systems that are specifically optimised for practical use.

## ASSEMBLY OF THE HIGHEST QUALITY

The **Business Unit Contract Manufacturing** is your flexible and a local partner for production-related topics so you can focus on your core competences. Our process-oriented and ESD-compliant assembly lines simplify even complex processes and guarantee the highest quality. We not only take on small to medium and large series, but also the production of prototypes. We also support you with product and assembly improvement options in order to optimise your costs.

- Prototype production
- Small series production
- Assembly production
- Cable assemblies
- Outsourcing projects
- Supply chain management
- ESD-compliant assembly

### **As an efficient and agile partner**

in the field of assembling, we not only take over the assembly activities, but also take care of the entire supply chain if required – all the way through to lifecycle management.

## MECHATRONIC SYSTEMS FROM A–Z

A comprehensive range of services enables the Antrimon Group AG to develop and manufacture mechatronic assemblies or entire systems. For various projects we took care of the engineering, supply chain management, assembly and quality management in our assembly department. Our expertise and services extend across various industries including, for example:

### MedTech

The development of MedTech devices is characterised by high quality requirements. We support you in the realisation of innovative mechatronic systems for medical technology. Benefit from our experience in the field of admission according to ISO 13485.

### Automation

Especially for Industry 4.0, our innovative products and comprehensive services support the efficiency and competitiveness of our customers. From drive technology catalog products to complete mechatronic systems from a single source, we offer solutions for simplified integration into the world of Industry 4.0.

### Robotics

Thanks to our expertise in the field of mechatronics, we offer valuable support in the design of compact systems in which power density, dynamics and positioning accuracy play an essential role. Integration is further simplified by proven drive technology products from our product portfolio.

## WE ARE THE FACTORY SWITZERLAND

With innovative approaches and a consistent digitalisation strategy, the SwissFactory.Group is redefining contract manufacturing in Switzerland. The aim is not only to prevent the further relocation of production capacities to Southern and Eastern Europe, but also to bring already «lost» orders back to Switzerland. This opens up the opportunity for the workplace Switzerland to follow several decades of deindustrialization with a decade of reindustrialization.

### **À la carte from A–Z**

As a leading industrialisation partner, the SwissFactory.Group offers support along the entire value chain (from the idea to development, purchasing, production and assembly, logistics and after-sales). Furthermore, we always keep an eye on your product's entire life cycle. We find the right technology for you, at the right time, with the right price. Additionally, you can obtain our services according to your specific needs – SwissFactory.Group à la carte!

### **Flexible structure**

The SwissFactory.Group unites Swiss SMEs which accompany the entire manufacturing process from the idea to the life cycle management of your product. The companies always remain autonomous and independent, but offer your project the opportunity to access additional services and synergies to create optimal conditions.
